[^1]:    ${ }^{1}$ Race alone or in combination with one or more races.
    ${ }^{2}$ The 2008 ACS used a joint relationship/marital status edit and 2000 Census did not. Also, 2000 Census provided more response categories because of a write-in option that was not used in the ACS. Differences in weighting schemes between the census and the ACS could produce inconsistencies in comparisons.
